2 functional teat
2 milk channels
1 non-functional teat

Questionable

- 6**
1 functional teat
2 milk channels

- 7**
1 functional teat
2 milk channels
1 non-functional teat

- 8**
Split teat

- 9**
Cluster teats

- 10**
1 functional teat &
with cluster

- 11**
Split teat

ABGA Breed Standards

Does should have well formed udders with good attachment with the number of functional teats not to exceed two per side. A split teat with two distinctly separated teats and openings with at least 50% of the body of teat separated is permissible but teats without a split are preferred.

It is most important that the udder is constructed so that the offspring are able to nurse unassisted.

Faults: Udder and teat abnormalities or defects to include but not limited to oversized or bulbous teats, pendulous udder.

Disqualifications: Cluster teats, fishtail teats or a doe that has not kidded or exhibited signs of pregnancy by 24 months of age

Disqualification

- 12**
Split teat

- 13**
Fishtail teat

- 14**
Fishtail teat

- 15**
Cluster teats
